

You keep the client. We never meet them.

You subscribe. You attach accounts you already operate. Read-only unused-resource scans across 30+ AWS services and every enabled region (51+ detection types). Weekly digest to your inbox. You bill the fix.

// WHO THIS IS FOR

You already operate the accounts

Landing zone, retainer, or a cleanup you are already on the hook for. The client stays yours.

You bill the work

Well-Architected, workshops, remediations. You do not want to maintain another scanner.

You do not share the book

No intro. No second vendor in the relationship. We never meet your clients.

// WHY IT FITS YOUR PRACTICE

You subscribe

Paid plan on your AWS Marketplace invoice. Fold it into the retainer, or eat it.

Digest lands with you

Email, Slack, or Teams to your practice. You decide what the client sees.

White-label if you need it

Org name and logo already sit on reports. Digest and app under your brand only: ask. Optional.

// HOW YOU RUN IT

01

You subscribe on AWS Marketplace, against your own org. Startup or Business. Private offer if procurement wants it.

02

You deploy a read-only IAM role in accounts you already touch. CloudFormation, Terraform, or StackSets. You inspect the template.

03

Weekly digest to you. You run the cleanup. That is still your SOW. The scan stays on between workshops.

// WHAT THE SCAN NAMES

Idle EC2, unattached EBS, forgotten NAT gateways, gp2 to gp3, EKS extended support, CloudWatch waste, idle RDS, unused EIPs, and the rest of the 51+ rules. Deterministic. Field detections Cost Explorer will not name. Unlimited accounts from Startup. 1 credit is 1 resource on one scan.

Startup \$149/mo • 15,000 credits • email and Slack. Business \$500/mo • Teams. Prices monthly, billed annually, on AWS Marketplace. Your org pays. Not theirs.

Not an MSP that takes the account. Not auto-remediation. We do not email your clients. ZOPH.IO SASU, France. Control plane in eu-west-1. Public /security. DPA on request.

Private offer, NDA, or white-label: support@unusd.cloud

unusd.cloud • /security • [AWS Marketplace](#)

No agents. No stored keys. We do not auto-remediate.
